

Accusonus introduces Regroover Pro, updates Regroover Essential to v1.2 & offers Regroover “Alpha Pack” for free!

Accusonus Inc, makers of tools like the ingenious microphone leakage suppression tool **drumatom** and the multi-patented post-production tool **ERA-D**, released the new member of Regroover family: **Regroover Pro**. In September 2016, **Accusonus Inc**. introduced **Regroover Essential**, an industry first that integrates Artificial intelligence algorithms into an innovative beat machine that splits sounds into Layers. **Regroover Pro** goes a step further and enables the creation of expansion kits from the layers of the “unmixed” audio clips. By allowing musicians to extract and edit previously unreachable sound elements, **Regroover Pro** can create a full sound library from one “modest” audio file and save it as a self contained Regroover Project.

Accusonus also updated **Regroover Essential** to v1.2 which can now load Regroover projects created with **Regroover Pro**. The Regroover “**Alpha Pack**” (the first ever official Regroover sample Pack) containing Regroover projects with royalty free one-shot samples and loops has been also made available for free.

Key Features

- Use the A.I. engine to analyze audio clips and extract sound layers.
- Finetune the split results with the A.I. analysis tools to dig deeper into your sound
- Remix your beats with unprecedented flexibility using MIDI functionality
- Apply your favourite effects, by routing your layers to multiple outputs
- [Pro Only] Perform multiple splits and drag selected Layer regions to the Expansion kit pads
- [Pro Only] Import external sounds and combine them with your extracted samples to create inspiring Regroover kits
