Welcome to HappyPlacer!

First of all, let us express our deepest respect and warmest appreciation! Just because of the fact that you are here, we now realize that there are 3 types of people:

- those who read manuals
- those who don't read manuals
- YOU!

We don't want to make you feel lonely, but you are probably one of the very few people on this planet who look into the manual of an audio plugin that tells jokes! That means that you probably read the manuals of every product you own. For this, our support team wants to send you a BIG HUG. When you have some spare time, drop us an email at support@accusonus.com and let us know that you read this: we need to stay close! Alternatively, maybe write a message in a bottle (and we hope we'll rescue you before you fall into despair...)

Unzip, install, open the plugin inside your favorite DAW and go to your happy place.

Requirements

Your computer must have:

- at least some RAM memory
- at least some free space on your hard disk

Supported formats

The HappyPlacer is available as a **effect** in the following formats:

1. AU (32/64-bit), VST (32/64-bit) for Mac OS X 10.8 to 10.11
2. AAX (64-bit) for Mac OS X 10.9 to 10.11
3. VST (32/64-bit) and AAX (64-bit) for Windows 7 (with Service Pack 1) or higher

We honestly didn't have time to thoroughly test this plugin inside a lot of DAWs, but we have reasons to believe that it's stable. And also, there are just too many combinations of DAWs and plug-in formats out there. So if you encounter any problems in your DAW, please let us know at support@accusonus.com

Experience HappyPlacer in two minutes!

You can get started with HappyPlacer in just five steps:

1. Open the plugin in an effect slot in any DAW channel
2. Use the magic knob to select a music category
3. Browse the jokes with the arrows
4. Capture a screenshot of your favorite joke (the image will be saved on your desktop)
5. Share it on Facebook or Twitter
6. p.s. The HappyPlacer doesn't affect the sound. At all....
