Accusonus licenses advanced audio repair technology to Adobe

Patras, Greece (September 13, 2018) - [Accusonus Inc.](#), a leading provider of machine learning-based software products for audio repair and music production, has licensed its patented single-channel noise and reverb removal technology to Adobe. The Accusonus audio repair algorithms enable high-quality audio enhancement within easy-to-use, fast and efficient workflows. The new technology will be incorporated into the next releases of Adobe® Premiere® Pro CC, and Adobe Audition® CC, both part of the Adobe Creative Cloud®.

"Adobe Premiere Pro CC and Audition CC are tools that creatives depend on to tell stories and express their vision. With the addition of Accusonus audio repair technologies, we are further enhancing the audio toolset for our users with sophisticated cleanup capabilities that are remarkably easy to use," said Sue Skidmore, head of partner relations for Adobe professional video.

Alex Tsilfidis, CEO of Accusonus said "We are very excited to be working with industry leader Adobe to enable their vast user community to repair audio content better and faster than ever before. As the importance of audio content grows in media applications, our innovative solutions are proving to be indispensable for both expert and entry-level media creators."

In addition to the noise and reverb removal technology in the upcoming releases of Adobe Premiere Pro CC and Audition CC, Accusonus offers a suite of Enhancement and Repair of Audio (ERA) single-knob plugins and will soon be introducing two new offerings available for separate purchase: the ERA De-Clipper and ERA Voice Leveler. With these new additions, the standard Accusonus ERA Bundle - which includes ERA Noise Remover, ERA Reverb Remover, ERA De-Esser, and ERA Plosive Remover - will total six plugins. All Accusonus ERA plug-ins have been tested extensively and work seamlessly within Adobe Premiere Pro CC and Adobe Audition CC. Each of these solves an important, common audio problem by offering high-quality processing in a streamlined workflow. The ERA Bundle Pro adds ERA-D, a joint de-noise and de-reverberation tool that offers a dual channel workflow and spectral band processing.

Accusonus' ERA Bundle plugins run on both Windows and Mac platforms. To learn more about these and other Accusonus products as well as more information about Accusonus please visit <https://accusonus.com/products/audio-repair>

Accusonus is a rapidly growing, leading provider of innovative audio repair and music creation software. Through novel applications of machine-learning and artificial-intelligence, Accusonus is developing audio solutions that enable previously unimaginable sound processing results and workflows. Accusonus' ERA Bundle is a next-generation suite of audio repair products that offer both high-quality processing and fast workflows for professional and entry-level audio content creators alike. Accusonus' critically acclaimed Regroover is a game-changing music creation product that un-mixes audio loops to generate novel beat-making workflows. Founded in 2014, accusonus is based in Massachusetts (USA) and in Athens and Patras (Greece).

Adobe at IBC 2018

At IBC 2018, Adobe will reveal new video features coming soon to Adobe® Creative Cloud® that bring creative power, production efficiency, and connected tools for broadcasters, brands, filmmakers, and online content creators. The upcoming release will include new production tools for motion graphics, color, audio, animation and immersive content. IBC attendees can see the features, available later this year, at the Adobe stand (#7.B35). For more information, visit www.adobe.com.
